

# IMDB Movies Analysis

## Project No.5

Name :- Ayush Ravindra Vaidande

# Software Used

- MS EXCEL 16.0.13

# Task

- A.Cleaning the data: This is one of the most important step to perform before moving forward with the analysis. Use your knowledge learned till now to do this. (Dropping columns, removing null values, etc.)

Your task: Clean the data

- B.Movies with highest profit: Create a new column called profit which contains the difference of the two columns: gross and budget. Sort the column using the profit column as reference. Plot profit (y-axis) vs budget (x- axis) and observe the outliers using the appropriate chart type.

Your task: Find the movies with the highest profit?

- C.Top 250: Create a new column IMDb\_Top\_250 and store the top 250 movies with the highest IMDb Rating (corresponding to the column: imdb\_score). Also make sure that for all of these movies, the num\_voted\_users is greater than 25,000. Also add a Rank column containing the values 1 to 250 indicating the ranks of the corresponding films. Extract all the movies in the IMDb\_Top\_250 column which are not in the English language and store them in a new column named Top\_Foreign\_Lang\_Film. You can use your own imagination also!

Your task: Find IMDB Top 250

- 
- D. Best Directors: TGroup the column using the director\_name column. Find out the top 10 directors for whom the mean of imdb\_score is the highest and store them in a new column top10director. In case of a tie in IMDb score between two directors, sort them alphabetically.

Your task: Find the best directors

- E. Popular Genres: Perform this step using the knowledge gained while performing previous steps.

Your task: Find popular genres

- F. Charts: Create three new columns namely, Meryl\_Streep, Leo\_Caprio, and Brad\_Pitt which contain the movies in which the actors: 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' are the lead actors. Use only the actor\_1\_name column for extraction. Also, make sure that you use the names 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' for the said extraction. Append the rows of all these columns and store them in a new column named Combined. Group the combined column using the actor\_1\_name column. Find the mean of the num\_critic\_for\_reviews and num\_users\_for\_review and identify the actors which have the highest mean. Observe the change in number of voted users over decades using a bar chart. Create a column called decade which represents the decade to which every movie belongs to. For example, the title\_year year 1923, 1925 should be stored as 1920s. Sort the column based on the column decade, group it by decade and find the sum of users voted in each decade. Store this in a new data frame called df\_by\_decade.

Your task: Find the critic-favorite and audience-favorite actors

# Cleaning the data

- 1. First dropping the columns which have no use for the analysis that we will be doing
- 2. Columns like 'Color', 'director\_facebook\_likes', 'actor\_3\_facebook\_likes', 'actor\_2\_name', 'actor\_1\_facebook\_likes', 'cast\_total\_facebook\_likes', 'actor\_3\_name', 'facenumber\_in\_posts', 'plot\_keywords', 'movie\_imdb\_link', 'content\_rating', 'actor\_2\_facebook\_likes', 'aspect\_ratio', 'movie\_facebook\_likes' are the columns containing irrelevant data for the analysis tasks provided. So, these columns need to be dropped.
- 3. After dropping the irrelevant columns now we need to remove the rows from the dataset having any of its column value as blank/NULL
- 4. Then we need to get rid of the duplicate values in the dataset which can be achieved by using the 'Remove Duplicate Values/Cells' available in the 'Data' tab

# Movies with highest profit

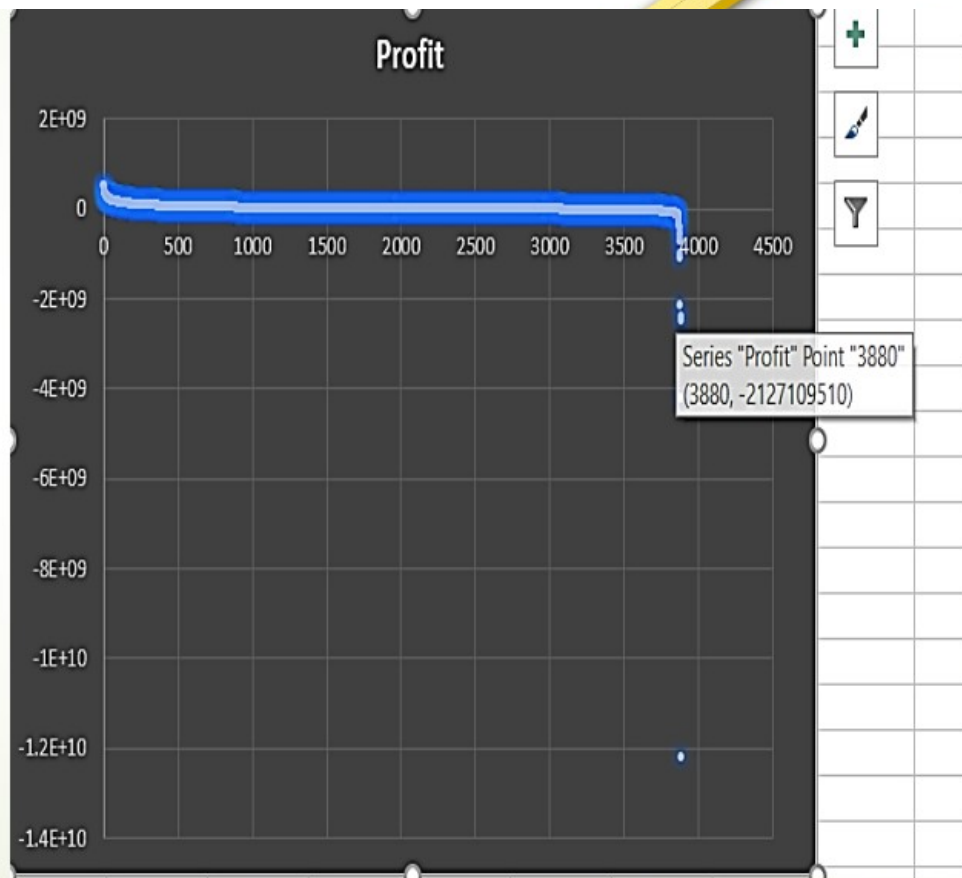

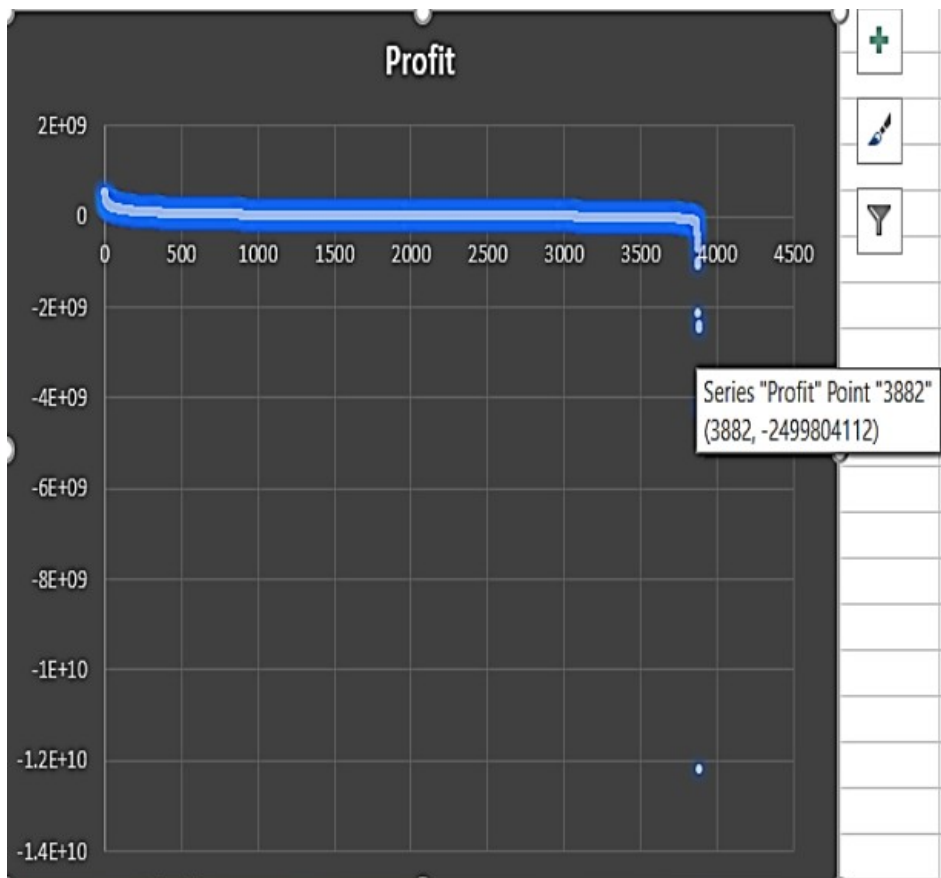

- To find the movies with the highest profit: -
  1. First we need to subtract the budget value from the gross value to get the profit.
  2. Then, by using the scatter plot option we will plot values of profit(y\_axis) and budget(x\_axis)
  3. Then with the help of graph we will be finding the outliers

The outliers are:-

-12213298588  
-4199788333  
-2499804112  
-2127109510  
-1099560838

## Top 5 Movies with the Highest Profit

director_name	num_critics_for_review	gross	genres	actor_1_name	movie_title	num_voted_users	num_users_for_review	language	country	content_rating	budget	title_year	imdb_score	Profit
James Cameron	723	760505847	Action   Adventure   Fantasy   Sci-Fi	CCH Pounder	Avatar	886204	3054	English	USA	PG-13	237000000	2009	7.9	523505847
Colin Trevorrow	644	652177271	Action   Adventure   Sci-Fi   Thriller	Bryce Dallas Howard	Jurassic World	418214	1290	English	USA	PG-13	150000000	2015	7.5	7502177271
James Cameron	315	658672302	Drama   Romance	Leonardo DiCaprio	Titanic	793059	2528	English	USA	PG-13	200000000	1997	7.7	458672302
George Lucas	282	460935665	Action   Adventure   Fantasy   Sci-Fi	Harrison Ford	Star Wars: Episode IV - A New Hope	911097	1470	English	USA	PG	11000000	1977	8.7	449935665
Steven Spielberg	215	434949459	Family   Sci-Fi	Henry Thomas	E.T. the Extra-Terrestrial	281842	515	English	USA	PG	10500000	1982	7.9	424449459

# Top 250

- To find the IMDB Top 250 we will:-
- 1. First we will filter out those rows whose num\_voted\_users > 25000 using the sort and filter option
- 2. Then we will arrange the dataset on the basis of imdb\_score in descending order
- 3. Then we will select only the top 250 rows for the further analysis
- 4. Then we will create a new column rank using the RANK() function and using the formula=RANK(N2,\$N\$2:\$N\$251,0)+COUNTIFS(\$N\$2:N2,N2)-1
- 5. Then we will filter out (unselect 'English') from the language column and we will get the desired output

Link(english) :- <https://docs.google.com/spreadsheets/d/1Q2RJrkHtyxNOxSWdXlaXQaDgg3dKagNG/edit?usp=sharing&oid=106453368991801942104&rtpof=true&sd=true>

# Best Directors

- 1. First select the imdb\_score column of the cleaned dataset
- 2. Then we will click on pivot table
- 3. We will add director\_name into the series section of the pivot table
- 4. Then we will add average imdb\_score into the values section of the pivot table
- 5. Then we will first sort the data on the basis of average of imdb\_score in descending order and then on the basis of director name alphabetically

Top 10 director having the highest IMDB mean	
Director Name	mean of Imdb Score
Charles Chaplin	8.6
Tony Kaye	8.6
Alfred Hitchcock	8.5
Damien Chazelle	8.5
Majid Majidi	8.5
Ron Fricke	8.5
Sergio Leone	8.433333333
Christopher Nolan	8.425
Asghar Farhadi	8.4
Marius A. Markevicius	8.4

# Popular Genres

- 1. First select the genres column of the cleaned dataset
- 2. Then we will go for the pivot table option
- 3. Then we will Select the genres name as row labels
- 4. Then we will the values as the count of the number of genres and then sort it in descending order on the basis of count of the number of genres

Top 10 Popular genres are:-	
Genre name	count
Drama	153
Comedy   Drama   Romance	151
Comedy   Drama	147
Comedy	145
Comedy   Romance	135
Drama   Romance	119
Crime   Drama   Thriller	82
Action   Crime   Thriller	55
Action   Crime   Drama   Thriller	50
Action   Adventure   Sci-Fi	46

- 
- Link :- <https://docs.google.com/spreadsheets/d/14HruJcuqXi9MBWILKjwdSaXgU9SdAP4C/edit?usp=sharing&ouid=106453368991801942104&rtpof=true&sd=true>

# Charts

1. First three new columns namely, Meryl\_Streep, Leo\_Caprio, and Brad\_Pitt which contain the movies in which the actors: 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' are the lead actors from the actor\_1\_name column
2. Then we will append the above 3 created columns into 1 column named actor\_1\_name\_combine
3. Then we will group the 3 columns of critic-favorite and audience-favorite actors
4. Then using the pivot table we will find the average, sum and count of criticfavorite and audience-favorite actors

- actor named Meryl\_Streep

director_name	num_critic_f or_reviews	gross	genres	actor_1_name	movie_title	num_voted_users	num_user_for_reviews	language	country	content_rating	budget	title_year	imdb_score
